## **Scientific Results of MSL Mission To be Discussed Aug. 25-26 Here**

International researchers will reunite to share scientific results Aug. 25-26 during a conference at Marshall — one year after the flight of 33 experiments aboard Space Shuttle Columbia. Investigators will present results from experiments conducted in microgravity — the near-weightlessness of space — that may lead to better automobile and aerospace alloys, new and faster computers chips, and safer more efficient fuels.

**Town Meeting  
Planned for  
1:30-3:30 p.m.  
Tues. in Bldg.  
4570**

**Toastmasters  
Mtg. 11:30 a.m.  
Tues., Bldg.  
4610, Cafeteria  
Conference Rm.**

## **NASA & Marshall's GHCC Keep An Eye on Hurricane Bonnie**

NASA flew a DC-8 aircraft into the eye of Hurricane Bonnie Aug. 23 as part of a hurricane and tropical storm study that began mid-August and continues through Sept. 23. The study — led by Mission Scientist Robbie Hood and researchers from Marshall's Global Hydrology & Climate Center — aims to improve hurricane predictions on the ground. The focus of the study is to learn more about the strength and direction of hurricanes and results could increase warning time — saving lives.
